Introductory Programming

(4CS001)

Coding Challenge

Student ID: 2330781

Student name: Anjina Shahi

Group: L4CG5

Lecturer: Shiva Raj Pandey

Submitted on: 2022/12/21

1. What are the most challenging aspect of the coursework task?

   The most challenging aspect of the coursework task was to merge the separated (temporary) arrays. The logical part of the task was easy to understand but the coding part was difficult. We have mostly done our previous programs by using one class and one method. But in this course work, we had to use multiple methods to ask the user for the array, sorting the arrays into smaller parts by dividing them, until they are separated into one element and merging them back together by comparing each element and finally getting the output by calling it in void main.

2. How did you go about completing the task?

At first, it was difficult to start coding just by reading and understanding the algorithm. The sub-array should be sorted recursively by using the merge function method. We had no idea about recursion, how it works and how to implement it in the program. Also, we haven't studied functions thoroughly. There were many doubts and confusion about it. So to have a better clarification, I watched videos on youtube related to merge sort. And my friend also helped me with my confusion. I took references from different websites, and I was able to complete the task.

3. What have you learned over the course of completing this coursework task?

I have learned many things over the course of completing this coursework task. I had confusion about using different methods in one class. We had to use different methods in this program, but after using it in this coursework I am much more clear about it. In this program, we had to use the scanner class to ask the user for the input, declaring the variables, if statements, while loops and for loops, Boolean logics, comparisons, array lists and get methods, and set methods. After doing this task I have some idea about recursion. And if I am given a similar task like this one I think I will be able to do it.
